

# Community Energy Lecture Series

## The North Slope Export Gasline: Myths, Truths, and Dreams

Tuesday, March 18, 2014

6:00 pm to 7:30 pm

**Location: Blue Loon  
(2999 Parks Highway)**

### Speaker:

**Antony Scott**  
Senior Economist and Energy Analyst  
Alaska Center for Energy and Power

Will an export pipeline provide cheap gas for Alaska? Won't it solve the state's financial woes? How should we evaluate state project ownership? If a gas pipeline hasn't happened does that mean that it's not economically viable? If it's Alaska's gas, why can't we just make them build it?

Join ACEP's Antony Scott in a discussion of these and other big topics. Antony is an energy economist, and worked to advance the state's interests in gas commercialization under four State administrations. He has an insider's view of the complications and realities associated with what would be the history's largest private investment.
